

MASKS

We will not participate in the Mask Enforcement Party at this time.

However, we will always respect individual rights to wear a mask if they choose.

In the same way we ask that mask theorist grasp the concept that other people in this country are just as free and capable to think for themselves when it comes to their physical comfort, livelihood, and health. Deciding if they don't need and or want to wear a mask is their choice not yours.

If you can't handle that statement and freedom of speech like an educated adult you may want to find another small business (that has not closed yet) to go to.

The Data and the Science that is being pushed by the media and certain government politicians as well as Health Care Organized Conglomerates have contradicted themselves at every turn and are providing deceitful/misleading information.

Now we could give you the Data, Stats, Science, and Facts but at this point it is more important that you research and learn for yourself.

So, if you feel you would like to challenge us on this, please answer these simple questions (like we already have). We will be happy to compare notes with your research.

1. By wearing a mask(s), the virus spread can be reduced by what rate/percent/person? *(If you can't answer this immediately without hesitation, you are not informed enough to make an opinion either way regarding masks. Educate Yourself)*
2. How effective are cloth masks in efficiency as it relates to a virus and its spread rate?
3. How effective are surgical masks in efficiency as it relates to a virus and its spread rate?
4. There are 13 States that do not have a mask mandate. Ohio has the same Hospitalized rates per population as the average of these non-mask wearing states. Why did the mask mandate have no effect on slowing the spread in comparison?
5. Why did the average of hospitalizations in mask mandate states have 3 Times the Hospitalizations compared to the non-mask mandate states?
6. What is the science that these non-mask mandate states used to base their decisions on?

7. We were able to forecast the virus impact with accuracy back in July 2020 for the entire year of 2020. Did you do that? Can you prove it like we can?
8. Does the Government and Health Care ever do anything wrong? Have they done wrong collaboratively together historically?

Are you showing signs and symptoms of COVID? Don't go out in public and stay quarantined at home. Asymptomatic spread of COVID-19 does not occur with any significance.
